

Last Chance to Stop Outdoor Toxic Bomb Blasts at

TRACY PUBLIC HEARING

FOR LIVERMORE LAB'S

SITE 3000

Thursday, July 12, 2018 at 6:30pm

Air District Public Hearing: 333 Civic Center Plaza Tracy, CA

Proposed Action to INCREASE the weight/size of outdoor toxic bomb blasts.

- 100 lbs./day to 1,000 lbs./day (10x more)!
- 1,000 lbs./yr. to 7,500 lbs./yr. (7.5x more)!
- More than 121 hazardous substances included in the explosions, according to the lab!

The San Joaquin Valley Air Pollution Control District has issued a preliminary decision to give Site 300 permission to detonate these open-air toxic blasts. The air district's public hearing on Thursday, July 12th is our last and best chance to stop the project.

Want To Prevent This in Our Air? Attend the Hearing!

This is an actual photo of outdoor toxic blasts at Site 300
